

## FEATURES

### LIVE VIDEO & AUDIO

Users can stream video files using only webcams and microphones. This video conference software provides all the benefits of face-to-face meetings, plus the great advantage of not having to share the same physical space as the other participants. Both the presenter and the participants can share videos and hear each other, so the communication will work smoothly.

### TEXT CHAT

This option is provided by video conference software in order to better communicate with your stakeholders. As a presenter, you can enable or disable this feature for the other participants to the event. It also provides the possibility to choose the text size.

### SCREEN SHARING & DESKTOP SHARING

One of the most important features of this video conference software allows participants to the event to see everything there is on your desktop or on your screen. Using it you will have an easy and reliable way to convince your clients or employees by letting them see all sorts of presentations, statistics or surveys.

### WHITEBOARD FOR ANNOTATIONS

Presenters can share suggestive drawings and sketches with the participants to the event. Every user has the possibility to make changes on the board, so the explanations will be more efficient. Another utility for this annotation board is the fact that any user can save the board and use it in another conference if he needs to.

### RECORDING AND SAVING

This feature enables on-demand view of a conference. The presenter has the possibility to record multiple sessions for a single conference, set rights for the on-demand view medium and save the conference in his admin area. Recorded sessions can be accessed by just clicking on a link and all events will be dispatched chronologically just as they took place during the conference, so that the "live" effect will be preserved.

With this feature provided by StreamingBASE video conference software, people that didn't make it to the live event can watch the recorded session on-demand whenever they want.

## CONDUCT POLLS AND SURVEYS

This video conference software designed a feature for situations in which fast answers to important questions are needed. It is very useful if you need to rapidly collect and analyze opinions from your stakeholders, and also much cheaper. You don't have to contact a specialized company in order to conduct an audit inside your company, you can do that yourself using our video conference software.

## SET CONFERENCE FEE

This option allows our clients to charge fees for hosting events. This is an important option for people engaged in training or teaching activities. Choosing this option determines a win-win situation: our client won't have to worry about traveling around or finding spaces large enough for hosting a face-to-face event. On the other side, our client's customers will find that solution really beneficial and cost-effective.

## CONTENT SHARING

StreamingBASE video conference software allows you to share files from your computer or from the library with the participants to your conference. You don't have to send the images to each person individually because when you use this option, the file will be loaded in the sharing panel and everybody will see it.

## DEFAULT LAYOUTS

A series of predetermined layouts are provided by our video conference software, each of them suitable for a different kind of event. All the windows are scaled to the perfect dimension, but we took in consideration your needs and allowed you to resize any window you want.

## CUSTOMIZABLE LAYOUT

If none of our default layouts is proper for you, just create your own layout. This video conference software allows you to easily choose which of the windows are necessary for your events and manage them by selecting the right place and size for each one.

## SYNCHRONIZING LAYOUTS

Choose this option if you want all the participants to share the same layout. If you are the organizer and you change your layout, all the participants will see the changes you've made. With synchronizing layouts feature, this video conference software makes sure that none of the participants won't close any important window during the event.
